

Löve®

An *awesome* framework you can
use to make 2D games in Lua.

Jordi Borraz
Nil Muns
Ricard Ruiz
Héctor Vergel

Introducción

- Postprocesamiento
- Librería Externa
- Moonshine

Implementación

- Shaders en LÖVE
- GLSL

Ejemplos

- Shaders en LÖVE
- BoxBlur

🔗 List of effects

Currently, moonshine contains the following effects (in alphabetical order):

- **boxblur**: simple blurring
- **chromasep**: cheap/fake chromatic aberration
- **colorgradesimple**: weighting of color channels
- **crt**: crt/barrel distortion
- **desaturate**: desaturation and tinting
- **dmg**: Gameboy and other four color palettes
- **fastgaussianblur**: faster Gaussian blurring
- **filmgrain**: image noise
- **gaussianblur**: Gaussian blurring
- **glow**: aka (light bloom)
- **godrray**: aka light scattering
- **pixelate**: sub-sampling (for that indie look)
- **posterize**: restrict number of colors
- **scanlines**: horizontal lines
- **sketch**: simulate pencil drawings
- **vignette**: shadow in the corners

Ejemplos

- DMG
 - Efecto GameBoy

- Glow
 - Luminosidad

Ejemplos

- DMG
 - Efecto GameBoy

```

local lookup_palette = function(name)
  for _,palette in pairs(palettes) do
    if palette.name == name then
      return palette
    end
  end
end

local is_valid_palette = function(v)
  -- Needs to match: {{R,G,B},{R,G,B},{R,G,B},{R,G,B}}
  if #v ~= 4 then return false end

  for i = 1,4 do
    if type(v[i]) ~= "table" or #v[i] ~= 3 then return false end
    for c = 1,3 do
      if type(v[i][c]) ~= "number" then return false end
      local x = v[i][c]
      if x > 1 then x = x / 255 end
      if x < 0 or x > 1 then return false end
      v[i][c] = x
    end
  end
  return true
end

```

<pre> name = "green", colors = { {8/255,56/255,8/255}, {48/255,96/255,48/255}, {136/255,168/255,8/255}, {183/255,220/255,17/255} } </pre>	<pre> name = "greyscale", colors = { {56/255,56/255,56/255}, {117/255,117/255,117/255}, {178/255,178/255,178/255}, {239/255,239/255,239/255} } </pre>
<pre> name = "dark_yellow", colors = { {33/255,32/255,16/255}, {107/255,105/255,49/255}, {181/255,174/255,74/255}, {255/255,247/255,123/255} } </pre>	<pre> name = "stark_bw", colors = { {0/255,0/255,0/255}, {117/255,117/255,117/255}, {178/255,178/255,178/255}, {255/255,255/255,255/255} } </pre>
<pre> name = "light_yellow", colors = { {102/255,102/255,37/255}, {148/255,148/255,64/255}, {208/255,208/255,102/255}, {255/255,255/255,148/255} } </pre>	<pre> name = "pocket", colors = { {108/255,108/255,78/255}, {142/255,139/255,87/255}, {195/255,196/255,165/255}, {227/255,238/255,201/255} } </pre>

- Glow
 - Luminosidad

```

-- 1st pass: draw scene with brightness threshold
love.graphics.setCanvas(front)
love.graphics.clear()
love.graphics.setShader(threshold)
love.graphics.draw(scene)

-- 2nd pass: apply blur shader in x
blurshader:send('direction', {1 / love.graphics.getWidth(), 0})
love.graphics.setCanvas(back)
love.graphics.clear()
love.graphics.setShader(blurshader)
love.graphics.draw(front)

-- 3rd pass: apply blur shader in y and draw original and blurred scene
love.graphics.setCanvas(front)
love.graphics.clear()

-- original scene without blur shader
love.graphics.setShader()
love.graphics.setBlendMode("add", "premultiplied")
love.graphics.draw(scene) -- original scene

-- second pass of light blurring
blurshader:send('direction', {0, 1 / love.graphics.getHeight()})
love.graphics.setShader(blurshader)
love.graphics.draw(back)

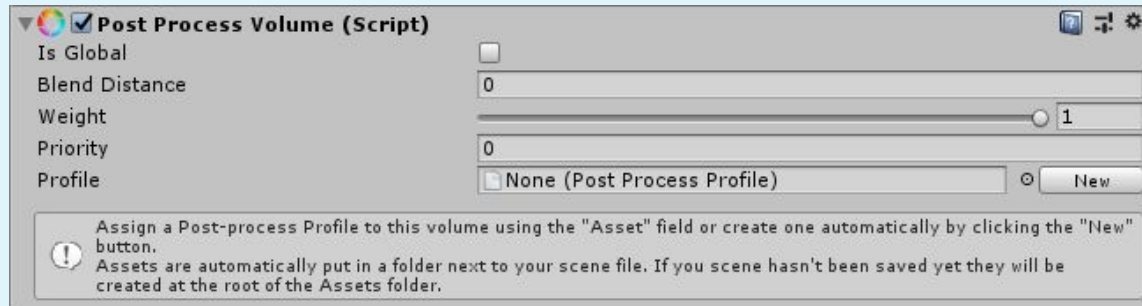

-- restore things as they were before entering draw()
love.graphics.setBlendMode("alpha", "premultiplied")
scene = back
end

```

LÖVE vs Unity

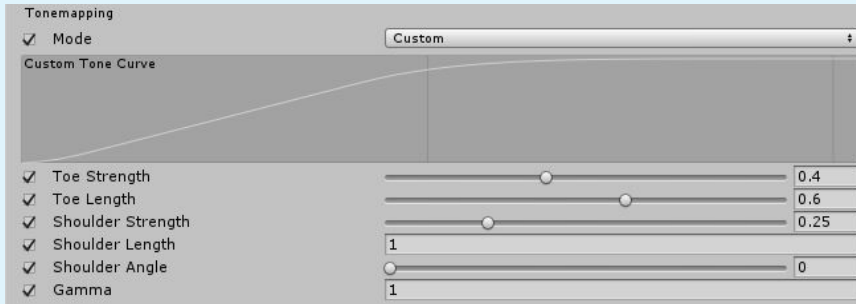

- Sistema de Componente “Volume”
- Más completo y versátil

LÖVE vs Unity

- Color-Grading
 - Efecto GameBoy y más

- Bloom
 - Luminosidad

Conclusiones

- LÖVE

- Todo por código
- Menos opciones
- Librerías Externas
- Más complicado

- Unity

- Facilidad por Editor y código
- Más opciones
- Integrado en el Motor
- Más sencillo

Gracias por vuestra atención
